

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (AMENDED) An AC-input/AC-output bidirectional power converter comprising converter cells, each of said cells comprising:
 - a first AC/DC converter which performs bidirectional power conversion between single-phase AC power and DC power;
 - a second AC/DC converter whose DC side is connected to the DC side of said first AC/DC converter, and which performs bidirectional power conversion between single-phase AC power and DC power;
 - a third AC/DC converter which performs bidirectional power conversion between single-phase AC power and DC power;
 - a fourth AC/DC converter whose DC side is connected to the DC side of said third AC/DC converter, and which performs bidirectional power conversion between single-phase AC power and DC power; and
 - a high-frequency transformer which is connected between the AC side of said second AC/DC converter and the AC side of said third AC/DC converter, wherein the AC nodes of said first AC/DC converters in said plurality of converter cells are connected in series with each other, and the AC nodes of said fourth AC/DC converters in said plurality of converter cells are connected in series with each other.
2. (AMENDED) A power converter as claimed in claim 1, wherein said power converter is directly connected in each phase to a three-phase AC power supply system.
3. (AMENDED) A bidirectional power converter for performing bidirectional power conversion between AC and DC, comprising converter cells, each of said cells comprising:
 - a first AC/DC converter which performs bidirectional power conversion between single-phase AC power and DC power;
 - a second AC/DC converter whose DC side is connected to the DC side of said first AC/DC converter, and which performs bidirectional power conversion between single-phase AC power and DC power;

a third AC/DC converter which performs bidirectional power conversion between single-phase AC power and DC power; and
 a high-frequency transformer which is connected between the AC side of said second AC/DC converter and the AC side of said third AC/DC converter, wherein
 the AC nodes of said first AC/DC converters in said plurality of converter cells are connected in series with each other, and the DC nodes of said third AC/DC converters in said plurality of converter cells are connected in series with each other.

4. (AMENDED) A bidirectional power converter for performing bidirectional power conversion between AC and DC, comprising converter cells, each of said cells comprising:

 a first AC/DC converter which performs bidirectional power conversion between single-phase AC power and DC power;

 a second AC/DC converter whose DC side is connected to the DC side of said first AC/DC converter, and which performs bidirectional power conversion between single-phase AC power and DC power;

 a third AC/DC converter which performs bidirectional power conversion between single-phase AC power and DC power; and

 a high-frequency transformer which is connected between the AC side of said second AC/DC converter and the AC side of said third AC/DC converter, wherein

 the AC nodes of said first AC/DC converters in said plurality of converter cells are connected in series with each other, and the DC nodes of said third AC/DC converters in said plurality of converter cells are connected in parallel with each other.

5. (CURRENTLY AMENDED) A power converter as claimed in claim 3 or 4, wherein the AC side of said power converter is directly connected in each phase to a three-phase AC power supply system.

6. (CURRENTLY AMENDED) A motor drive equipped with a power converter as claimed in claim 1 any one of claims 1 to 5.

7. (CURRENTLY AMENDED) A BTB system comprising a power converter as claimed in claim 1 or 2.

8. (CURRENTLY AMENDED) A grid-linking inverter system for linking between a DC system and an AC system, comprising a power converter as claimed in claim 3

~~any one of claims 3 to 5.~~
